PERSONAL PROJECT

AplusWeb using php

- in which we have 3 user student, teacher and admin .
- I have responsibility to write backend code
- we include feature like everyone login,fees,student details, event,result,timetable,attendance,homework

HealthToCare using php

- Create web application in which we manage all task related to health care by doctor and staff.
- Implement functionality is like take patient appointment , medical details,staff related fees manage.
- Generate bill of patient and you can directly connect to patient of them Whatsapp number and send out all document others details too.

CircleWeb using php

- This project create based on one problem to ask our group of people that any job is there, knowing where that person is work and posting job details of some is interested.
- To overcome that all problem i create this project where group of people do this all activity.

DevManage using laravel

- This website useful for IT company where feature like show developer,ongoing project details.
- Also i include view project,task list and show full profile of developer.

InfoScan using javascript

- This is small project name infoscan is one type of game of color.
- in which i create one container where i show color boxes you can select color box based on text i display above that all boxes
- That text is also come with color so you can select boxes where carefully be active your mind if you select wrong color you lose.
